# LoRaWAN with RAKWireless
Explore the Connected Industry!

Discover RAKWireless solutions distributed by Syscom-Prorep to meet the evolving needs of IoT. RAKWireless is a manufacturer of LoRaWAN modules and gateways for IoT.

Network Infrastructure

RAK offers a wide range of gateways to simplify the creation and expansion of reliable LoRaWAN® infrastructures, providing the ability to manage them remotely through the WisDM platform.

LoRaWAN Modules

Available through Syscom-Prorep, RAKwireless LoraWan modules offer exceptional flexibility to meet the requirements of industrial applications. Accompanied by comprehensive libraries and development environments, they ensure seamless integration.

The modules integrate both a microcontroller and a LoRa® transceiver in a compact format. Compliant with LoRaWAN® 1.0.3 protocols, they ensure a seamless connection with an external MCU through a simple AT command interface. Furthermore, these modules allow for hosting the application directly, making them capable of both communicating via LoRa and functioning as an MCU.
